Professional summary

I am a Full Stack Web Developer specializing in building modern, responsive, and user focused web applications. I have hands on experience developing complete frontend and backend solutions using React, JavaScript, Node.js, Express.js, MongoDB, REST APIs, and Tailwind CSS.

I have built fullstack projects including developer platforms, music streaming applications, and ecommerce stores, working with authentication, role based access, database management, API integration, third party services, and deployment. I also have experience with Shopify and AI integration.

I am passionate about problem solving, secure coding, and continuously improving my software development skills to build reliable and scalable digital products.

Work experience

Full-Stack Web Developer | Freelance

Fiverr | Remote

January 2026 to Present

- Developed responsive and user friendly websites and web applications based on client requirements.
- Built full stack solutions using React, JavaScript, Node.js, Express.js, MongoDB, and REST APIs.
- Developed e commerce solutions using Shopify and integrated third-party APIs and services.
- Implemented authentication, database management, API integration, and secure application practices.
- Communicated with clients to understand project requirements, solve technical problems, and deliver functional digital solutions.

Education

BSCS (5th semester)

virtual university,PSKP01-Virtual University Campus | Sheikhupura

August 2024 to August 2025

I'm a Full Stack MERN Developer and AI Integration Engineer who builds modern, responsive, and user focused web applications. I specialize in React, Node.js, Express, MongoDB, REST APIs, authentication, and third party API integrations. I enjoy turning ideas and business requirements into clean, functional digital products from business websites and dashboards to complete full stack applications. I focus not only on making applications work, but also on writing maintainable code, implementing proper authentication and security practices, and creating a smooth user experience. I'm always learning and improving my problem solving skills so I can deliver reliable solutions and grow as a strong software engineer.

Skills

Backend Development

Authentication & Authorization

User Experience (UX)

Version Control & Git

E-Commerce Development

API Development & Integration

Database Management

Security & Secure Coding

Frontend Development

Debugging & Troubleshooting

Application Architecture

Responsive Web Design

Deployment & Hosting

Web Application Development

Full-Stack Development

Certifications and licences

IBM DevOps and Software Engineering

March 2026 to Present

Completed the IBM DevOps and Software Engineering Professional Certificate, gaining practical knowledge of modern software development and DevOps practices. Developed hands on experience with Agile and Scrum, Git and GitHub, Linux, Python, cloud computing, microservices, and serverless technologies.

Worked with Docker, Kubernetes, OpenShift, CI/CD pipelines, automation, testing, application security, monitoring, and observability. Also developed AI applications using Python and Flask and applied DevOps concepts through hands on projects and a capstone project.

Building AI Agents and Agentic Work ows

March 2026 to Present

Completed the Building AI Agents and Agentic Workflows Specialization, gaining practical experience in designing and developing agentic AI systems. Worked with LangGraph, LangChain, CrewAI, AutoGen (AG2), and IBM BeeAI to build intelligent and modular AI workflows.

Developed hands on understanding of agent memory, iterative reasoning, conditional workflows, Agentic RAG, tool usage, feedback loops, and multi agent orchestration. Applied these concepts to create AI agents capable of reasoning, interacting with tools, and working through structured autonomous workflows.
